INFORMATION FOR CONTRIBUTORS

1. The monthly Journal "Optika i Spektroskopiya" exists for the purpose of publishing original experimental and theoretical work in physical optics, atomic and molecular spectroscopy, luminescence, and also studies in the areas of optical apparatus construction, photometry, and geometric optics.

2. Two copies of all articles should be submitted, typed legibly and without blurs with a black ribbon on one side of the paper, double-spaced (including tables, footnotes and figure legends). All manuscript pages, including the list of references, must be numbered. The title, author's names, honors, address and telephone number of the author should be typed at the end of the paper.

3. All equations and symbols must be clearly indicated in the text.

4. Foreign names cited in the text should be typed in the Russian transliteration; in the list of references, they should be given in the original language.

5. No contractions, except those universally accepted, are allowed in the text or in the tables.

6. In order to avert misunderstandings and errors the author must make a clear distinction between capital and lower-case letters in the equations. In those cases where the capital and lower-case letters are identical in shape and differ only in their size (C and c, I and i, K and k, P and p, S and s, U and u, V and v, W and w), the capital letters must be underlined with two short lines (for example, $\underline{\underline{S}}$), and the lower-case letter overlined by two short lines (for example, $\overline{\overline{s}}$). It is necessary to distinguish the letter O (capital), or (lower-case) and zero, so the letters (O and o) must be marked with two short lines, and zero be unmarked. It is also necessary to distinguish the letters I and J. In order to write the letter I as a Roman Numeral, it must be underlined with two short lines.

7. Cited equations must have consecutive ordinal numeration. Equation numbers should be arabic numerals in parenthesis at the end of the line.

8. All illustrative material (graphs, line drawings, half-tones) should be labeled "Figure", should be consecutively numbered and always written in the abbreviated form (for example, Fig. 1). On the reverse side of the figure the figure number, author's name, and title of the paper should be written in pencil. Figure captions should be typed on a separate sheet, and the author's name and the manuscript title should also be given thereon.

9. The figures should be traced in ink on tracing paper or on millimeter paper, or they can be photoreproductions. Photographs must be printed on white glossy paper and be free of defects. All definitions must have numbers or letters, which are explained in footnotes to the figure.

10. All figures must be enclosed in an envelope bearing the author's name and manuscript title.

11. The literature cited must be typed on a separate sheet. All references must be in the language of the original. Each paper cited must have consecutive numbering; reference citations in the text must be in square brackets. Papers in the list must be arranged in the same order in which they appear in the text. The citing of one paper with different numbers is not permitted.

12. References to papers still in press, in unpublished work, or to private communications are not permitted.

13. When two or more papers are cited simultaneously, it is necessary to indicate the desired order of numeration.

14. The editor will send the author one proof. Changes and additions to the text are not permitted. The proof must be sent directly to the editor one day after it is received, or publication of the paper will be delayed.

15. The author will receive twenty-five reprints of the paper after publication.

16. Manuscripts that do not satisfy these rules, or which contain substantial stylistic or other errors, will be returned to the authors for correction. The acceptance date of the manuscript will be the day it is received in its corrected form.
